HyperMotion Technology was developed by the game's Creative Assembly team, who worked closely with top-class research engineers at Monash University's Biomechanics Lab. This close collaboration between the game's developers and the university's experts in biomechanics and physics meant the team was able to build the most accurate representation of what a complete game would look like. To create a realistic match, the developers worked to ensure that every single detail was used to create the best possible experience possible. In the past, pressing the Square button would simply refresh the screen or swap displays. This time round, pressing the button will change the camera to show an overhead view, allowing you to see the full level more clearly. And if you're using VR Mode in the free Kick-Off demo, you'll be able to attend a full game. The way that players move on the pitch has been improved in FIFA 22 to make the game look even more realistic. FIFA (from Electronic Arts' FIFA stands for "FIFA video game" and the number "22" stands for the version) is a series of sports video games for Microsoft Windows, PlayStation 2, PlayStation 3, Xbox and Wii U consoles. It is the primary football video game in the series. The video games in the series are developed by EA Canada, and are distributed by Electronic Arts. The series is published in Europe by EA Mobile, and in North America by EA Sports. EA Sports also publishes FIFA 09/10 and FIFA 13. Gameplay FIFA video games, like most video games, feature a variety of gameplay elements, including various types of football, known as teams, to win matches. The current version of FIFA, FIFA 22, still features a 4-4-2 formation, although the players can wear shirts with numbers, and use players' faces in the game, like in real life. On a pitch or stadium, a match has a referee, or official, to make the final decision in the event of a dispute. One player is selected to kick the ball and score goals, while the other player defends his goal and tries to prevent the attacking player from scoring. In many variations of the game, the team that scores more goals than the other team by the end of the match, wins. As of the current version of FIFA, over 900 licensed teams, consisting of more than 900 players, are available to play. Teams include national teams like France, England and Brazil, club teams, international teams from different countries, and special teams. As of FIFA 22, EA Sports has introduced two player modes of gameplay: solo and online multiplayer.

History The first series of games in the series, released in September 1989, featured 12 teams, and was an exclusive Nintendo Entertainment System game, titled FIFA World. Every game in the series released after that, including the current FIFA series, features 22 clubs in the league, reflecting a new season of the year. The series has featured different game developers at different times. The original FIFA, released in 1989, was developed by Apogee Software, Inc., ported from the NES by Electronic Arts and published by Electronic Arts. The two subsequent FIFA games, released in 1990 and 1991 respectively, were developed by Next Level Software and published by Electronic Arts. The current iteration, developed by EA Canada and published by EA Sports, is the fourth to feature a FIFA World Cup in the game. The
